

## Introducing the New Messenger

With the new Messenger, we're simplifying the experience to put the focus back on messaging and connecting with the people you care about.

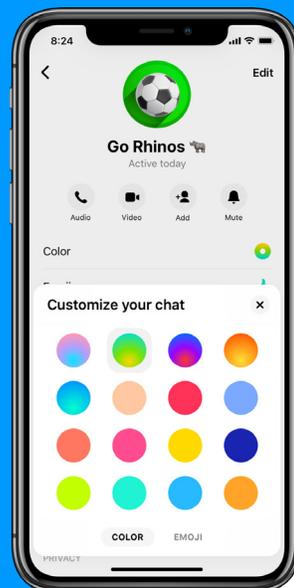

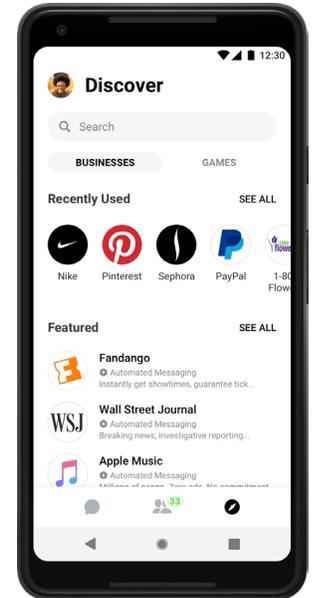

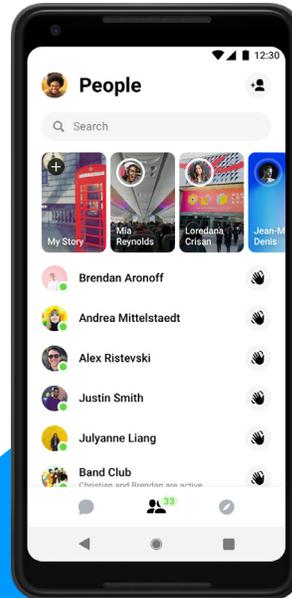

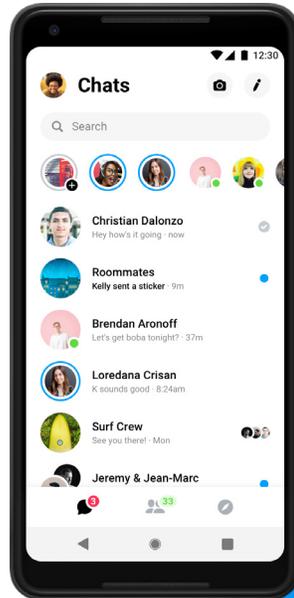

### What's new?

Messenger has been simplified from nine tabs into three tabs—Chats, People and Discover.

**Chats** tab lets you quickly see your messages - both from your friends and groups - and makes it easy to start new conversations and use the camera.

**People** tab now combines the Active and People tabs so you can easily find friends, see who's active online, and catch up on friends' Stories — all in one spot.

**Discover** tab connects you to your favorite brands, discounts, Instant Games and more.

### Customize your chat with gradients

We know people like to add a personal touch to their Messenger with nicknames, emojis and custom colors.

That's why we decided to add a small, but delightful update to chat customizations called color gradients.

With color gradients, you can now use multiple colors to customize your chat bubbles in conversations. You can see the colors change from yellow to green, for example, as you scroll up and down a conversation.

These gradients can be changed anytime to reflect your mood or current topic of conversation.

**To change gradient in group chat:**  
Tap group name at top of chat window > Select "Color" > Pick a new color gradient

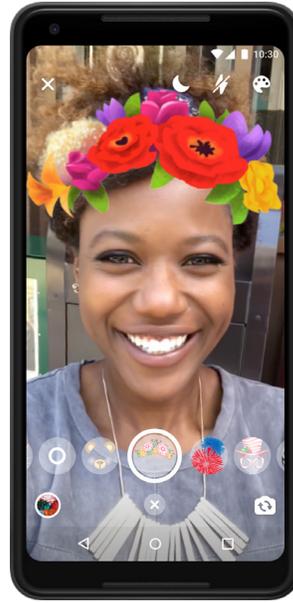

## What our users know and love

While we're focused on making Messenger simpler and easier to use, we're still keeping all of the powerful features that help you connect with the people you care about.

**Group Video Chat** with up to 50 people at the same time, so you can hang out with friends and family anywhere, anytime. It's the same experience, whether you have an iPhone or Android.

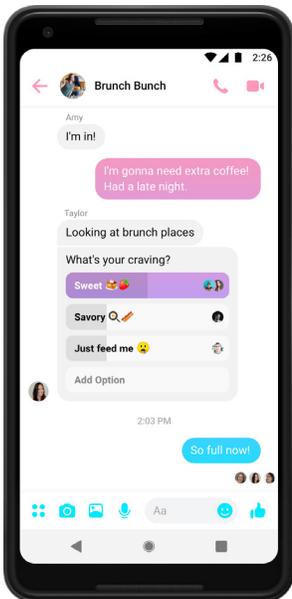

*(Free over Wi-Fi, otherwise standard data charges apply)*

**Stories** about your day can be easily shared with Messenger connections and Facebook friends, and you can easily watch your friends' stories too. You can also react to your friends' stories with emojis.

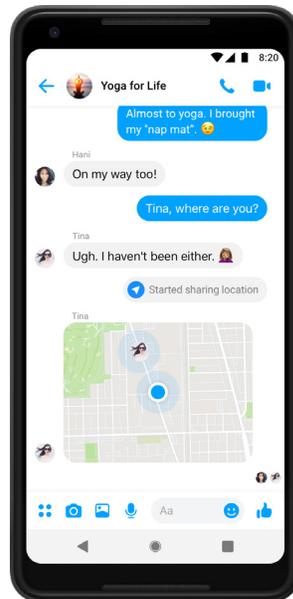

**What's coming soon?**  
In the near future, we're excitedly planning to introduce **Dark Mode**, which is a re-skinned interface that cuts down on the glare from your phone.

**Polls** to easily make plans to meet up and find out which movie to see or which game to play at game night.

**Instant Games** to play with friends within your conversation thread.

**Live Location Sharing** so you can suggest a meeting spot or tell friends where you are.
